***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Tani et al.

3. Tani discloses inorganic-organic hybrid materials having silicon tetrahedron layers and titanium octahedron layers, where outer tetrahedron layers contain polymerizable organic groups (abstract). It is the examiner's position that such materials would possess the applicant's claimed formula. Coatings are formed from such materials onto acrylic substrates and cured by UV radiation (col. 2 lines 26-31; example 4). Tani discloses that excess amounts of titanium alkoxides can be used to form the layered structure (col. 7 lines 38-43). Thus, a coating would comprise a layered structure and small amounts of excess titanium alkoxide.

4. Regarding the tetrahedral metallic atom, it is noted that Tani teaches substituting Ti, Al, Fe, and P for Si (col. 6 lines 23-35). Also, some of the octahedral atoms may be substituted with Mg, Al, Ni, Co, Cu, Mn, Fe, Li, V, or Zr (col. 7 lines 38-57). The mixtures are made by combining organoalkoxysilane, titanium alkoxide, silicon alkoxide, and organic solvent (col. 3 line 55-col. 4 line 7). Regarding the crosslinking present in the final coating, it is the examiner's position that the excess titanium alkoxide present in the coating mixture would serve to form the same crosslinks as those claimed, since the

Art Unit: 1711

materials are all the same. The reference teaches that the coatings have good UV-blocking functions and that conventional practices treat polycarbonate substrates with such coatings (col. 1 lines 22-32).
